Instructions for finger injuries
Please use statutory terms in referring to fingers, such as thumbs, index, middle, ring, and little fingers, and distal, middle, and proximal joints. Where there is limitation of motion, list separately the normal range of motion in degrees, the “degrees” loss of flexion, and the “degrees” loss of extension for each joint of each finger. The Worker’s Compensation Division will evaluate the loss of use due to loss of motion of the fingers.

Where there are other elements of disability of the fingers, such as deformity, weakness, pain, or lack of endurance, give your opinion on the percentage loss of use as compared to amputation for such elements of disability and specify the joint at which such loss is estimated.

Digit	**Joint**	**Angle Ext/Flex**	**Normal Range of Motion**	**Degrees Loss Extension**	**Degrees Loss Flexion**	**Estimate** % loss of use for additional factors at joint involved and reason for additional allowance

See DWD 80.32 & 80.33 for guides to evaluation for amputations, restrictions of motion, ankylosis, sensory loss, and surgical results for disability to the hip, knee, ankle, toes, shoulder, elbow, wrist, fingers and back.

If fingertip amputation is present, submit comparative x-rays or a statement indicating whether the bone loss was less than one-third, between one-third and two-thirds, or more than two-thirds of the distal phalanx.

If amputation is below the distal joint, submit comparative x-rays.
